Summary

Software Engineer with 7 years of experience doing web development and back end engineering. I'm really passionate about building software that makes people's lives better and enjoy working with empathetic people. Software Architecture enthusiast, with an understanding of trade-offs.

[Pesto](#) - *Senior Software Engineer* May 2022 - Company shut down in September 2022.

Worked on Pesto 2.0, product for virtual conferencing, featuring more engaging meetings with support for Widgets such as Timers, Meeting Notes. Used **React.js**, **GraphQL**, **WebRTC**, **PostgreSQL**, **Typescript**.

[Shiphero](#) - *Senior Software Engineer* June 2021 - May 2022 (Remote)

Developing improvements to the application in terms of scalability with **Python/Graphene (GraphQL)**, worked on the mobile app to add new features with **React Native/Typescript**, and periodically participated in on-call shifts to debug and fix bugs.

[GoExpedi](#) - *Engineering Manager* April 2020 - April 2021

Managed 10 engineers and an Engineering Manager. Responsible for **product delivery**, **process ceremonies and continuous improvement** of the overall team. Main Responsible for engineering interviewing. Coded 20% of my time with **Python (Django)** and **React.js**

[Rever Inc - Backed by Sequoia](#) - *Senior Product Engineer* December 2018 - March 2020

Focused on Software Architecture and growing our team from 2 to 12 people. My responsibilities were to make our Front and Back end teams deliver quality code with Code Reviews, Technical Specification documents, Pair Programming and workshops for Software Design and Testing. Worked with **Node.js**, **Python**, **MongoDB** and **PostgreSQL**.

[100 Ladrillos](#) - *Software Engineer* April 2018 - December 2018

I lived the hand-off of our first MVP developed by outsourcing. With the team, we did some analysis and improvements to the software, including more tests, improving software design, and kept growing the platform. Worked with **Ruby on Rails**, **Sinatra** and **Node.js**

[Wizeline](#) - *Software Engineer* October 2016 - April 2018 (Guadalajara, México)

Developed a Chatbots Platform, a product to build and deploy custom chatbots able to handle multiple messaging platforms such as Facebook, Microsoft Webchat, Intercom, and others. Applied some of the concepts of **Domain Driven Design** and **Clean Architecture**. I went through the whole stack with **React.js**, **Chart.js**, **Python (Falcon)**, **RabbitMQ**, **GCP**, and others.

[VoxFeed](#) - *Software Engineer (React/Node.js)* January 2016 - September 2016 (Guadalajara, México)
