April 2021 - Current (Remote)

[JungleScout](#) - *Engineering Team Lead*

In the Memberships & Billing team, **developing and maintaining** the subsystem in charge of communicating with **Stripe**. 80% coding and 20% team lead responsibilities (1:1s and lead meetings)

April 2020 - April 2021 (Guadalajara, México)

[GoExpedi](#) - *Engineering Manager*

Managing a team of 10 engineers and an Engineering Manager. Responsible for **product delivery**, **process ceremonies and continuous improvement** of the overall team. Constant syncing with our Product stakeholders to ensure we deliver and build the right products based on customer feedback. Introducing a Continuous Delivery culture within the team, making sure we get early feedback and we commit healthy code into our test environments. Python & Javascript mainly.

December 2018 - March 2020 (Guadalajara, México)

[Rever Inc](#) - *Senior Product Engineer*

Focused on **Technical Planning** (decomposing features through our different teams) and worked on our interview processes (defining interview questions and metrics). My responsibilities are to make our Front and Back end teams deliver quality code by doing **Code Reviews**, **Technical Specification documents**, **Pair Programming** and doing workshops for **Software Design and Testing**. Worked with Node.js, Python, MongoDB and PostgreSQL.

April 2018 - December 2018 (Guadalajara, México)

[100 Ladrillos](#) - *Software Engineer*

I lived the hand-off of our first MVP developed by outsourcing. With the team, we had to do some analysis and improvements to the software, including more tests, to grow the platform stability and reduce **maintainability** costs, and kept growing the platform aligned with the company goals. Worked with Ruby on Rails, Sinatra and

October 2016 - April 2018 (Guadalajara, México)

[Wizeline](#) - *Software Engineer*

Started working on the Wizeline first product which was a legacy system, and in the Wizeline [Bots Platform](#), a product to build and deploy custom chatbots. I helped to build the platform from scratch with the team, and we had to do a lot of Software Design to be able to respond to change and handle multiple messaging platforms such as Facebook, Microsoft Webchat, Intercom, and others. Applied some of the concepts of **Domain Driven Design** and **Clean Architecture**, and helped the team to have a more Test-Oriented culture by promoting the use of **Test Driven Development (TDD)**.

January 2016 - September 2016 (Guadalajara, México)
